Step to run ESP32

1- We create a definition for it File , then preferences , then copy the library link , then put it in the
2- 2- preferences
3- 3 - We click Tools , then Board , then Board Manager , then type ESP32 , then install , then close - A file , then an example , then BASIC , then Blink , and then we try to
4- program it
5- 5 - Select the board , go to Tools , then Board , then WEMOS
6- To make a definition for the port , connect the board to the computer via a cable . Once the board is connected , go to Tools , then Port , then COM8 . Once the code file is downloaded , the LED will start blinking .
